

OVERVIEW

This year's seminar will cover several New Frontiers related to the intersection of healthcare and law. First, we will look at Artificial Intelligence "AI" and medicine, including what we are seeing now and where this technology is expected to go. Second, participants will hear about the wearable devices, considering what products are medical grade FDA approved versus consumer facing, and the potential effect upon medical practices and lives. Finally, we will look at Ohio's new laws on abortion and marijuana, straight from the OSMA and a front line OB-GYN provider in the community. Healthcare providers, patients and lawyers are grappling with these issues today, and their implications will be part of the future. Having baseline knowledge and updates will keep us on point and moving forward with technology and laws that will dynamically change our practices.

AUDIENCE

This activity is designed for physicians and residents and is also of educational value for psychologists, PAs, NPs, nurses, students, advanced practice providers, and other health care professionals.
